Disclaimer: This web page is designed to aid farmers with their marketing and risk management decisions. The risk of loss in trading futures, options, forward contracts, and hedge-to-arrive can be substantial and no warranty is given or implied by the author or any other party. Each farmer must consider whether such marketing strategies are appropriate for his or her situation. This web page does not represent the views of Kansas State University.

ACRE for Corn¹

Update. Many readers have sent emails about the original posting of ACRE. First there were several writers that could not reproduce the same results. The original posting calculated the payment based on the gross guarantee rather than the correct calculation based on adjusted guarantee for the 10% cap/cup.

The other issue raised is; has the average price and price risk increased? Clearly the answer is yes, but how much? In the updated results the payment was reported both as percent of coverage and dollar amount. For example if we assume the long run mean for corn has increased from \$2.50 to \$5 and the standard error has increased from 50 cents to a dollar, then the coefficient of variation (CV) has not changed. If the CV has not changed then frequency and severity of ACRE claims would not change over the long run. The payment as percent of coverage is the better estimate of payment than the nominal dollar amount.

The other argument is that based on the current implied volatility based on market value of options, suggests the KSU estimated payments are understated. That is true, but the real question is what is the new mean and standard error for grain prices? Therefore, the KSU estimated ACRE payments are conservative estimates.

¹Prepared by G. A. (Art) Barnaby, Jr., Professor, Department of Agricultural Economics, K-State Research and Extension, Kansas State University, Manhattan, KS 66506, July 14, 2008, Phone 785-532-1515, e-mail – barnaby@ksu.edu.

A final note is ACRE will end with this Farm Bill. In 2013 Congress will need to pass a new Farm Bill, and it is anyone's guess if ACRE will be renewed. The estimated ACRE payments are based on long run data or are simulations for estimating probability of payments. Even if there is a high probability of payment, there will only be a maximum of 4 observations unless the program is included in the next Farm Bill, **while it is highly unlikely, it is possible that ACRE will not generate any payments.**

Original. KSU has developed tables that show the historical payouts under ACRE for corn in selected states. ACRE is a put option on expected state revenue defined as 5 year Olympic average state yield times the prior 2 year NASS marketing year average price. Optimal signup for ACRE will be in the year the expected market price (as measured by futures less basis) is less than the strike price in ACRE. Effectively one is buying an in-the-money put option on expected state revenue but the premium does not increase. The "premium" cost is 20% of the direct payment. Once farmers sign up for ACRE they can not switch back but there is a 10% cap and that increases the odds one will have an in-the-money put option on expected state revenue the next year. There is also a 10% cap, so one does not want to sign up for ACRE if the ACRE strike price is less than the expected new crop price. Farmers selecting ACRE must sign up all crops. More ACRE details are posted on AgManager.info.

Note: The acrobat file has all of the states in one file. In the HTML file, the states in the upper part of the alphabetical (Iowa and above, and states that qualify for irrigated practice) are in file #1 at:

http://www.agmanager.info/crops/insurance/risk_mgt/rm_html08/ABacre_corn1.asp

Note: In the HTML file, the states in the lower part of the alphabetical (below Iowa) are in file #2 at:

http://www.agmanager.info/crops/insurance/risk_mgt/rm_html08/ABacre_corn2.asp

The states are in alphabetical order, starting with irrigated and then non-irrigated states. The states that were assumed to have no practice specified then follow in alphabetical order. If more than 25% of the acres are irrigated then ACRE has both irrigated and non-irrigated yields. But it is unclear what will be done with a state that is more than 90% irrigated. In some cases NASS reports just total for crop even when it is clear they are irrigated corn acres, e.g. Utah. I just assumed total for the crop with no practice but the Secretary may do something different with states that are nearly all irrigated corn.

NASS did not report planted acres in all years. KSU has estimated the planted acres based on harvested acres, when NASS did not report a planted acre value. Also several states like Oklahoma and Texas historically did not split dryland and irrigated corn until the 1980's. This shortens the historical analysis of ACRE but the NASS data will be available for implementation of ACRE in the future.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.

¹If planted yield was not available, harvested yield was substituted.

²The farmer's 5 year Olympic average yield is divided by the State 5 year Olympic average yield times the state payment to generate the individual farmer payment.

³Farmer must also show a revenue loss below the Farm's benchmark revenue to receive a payment + premiums paid for crop insurance.

⁴Farmers selecting ACRE must select this program for all crops.

⁵Enrollment in ACRE will reduce a farmers' direct payments by 20% and reduce their marketing loan rate by 30%.
